

SKYBRIDGEZ AI ADVISORY & INNOVATION

Digital Confidence for Neurodivergent Learners, Families & Small Businesses

ABOUT SKYBRIDGEZ

Skybridgez AI Advisory & Innovation provides neurodivergent-friendly digital education, AI literacy training, and small business technology support for communities across the Tri-State region. Founded by educator and futurist Jo Gray, Skybridgez bridges the gap between overwhelming tech and everyday learning by offering clear, calm, accessible instruction designed for real human brains.

FOUNDER VISION

From her earliest explorations with AI, Jo wasn't creating novelty images—she was imagining the future. One of her first AI artworks depicted an underwater city with flying cars, created not for spectacle, but to explore possibility. As a Black woman founder with 15+ years of tutoring and neurodivergent support experience, Jo saw how many students, families, and adults struggled to adapt to digital tools that assumed too much and moved too fast. Skybridgez was created to be the bridge—a safe, accessible learning environment where technology feels empowering rather than intimidating.

MISSION

To deliver inclusive, culturally responsive, neurodivergent-friendly digital and AI literacy training that builds confidence, reduces overwhelm, and expands opportunity for underserved communities. Skybridgez exists to ensure no one is left behind in the rapidly evolving digital world.

PROGRAM OFFERINGS

- Neurodivergent-Friendly Digital Curriculum
- AI Literacy Training
- Small Business AI Support
- Skybridgez Online Learning Platform (2025 Launch)

COMMUNITY IMPACT

Skybridgez serves neurodivergent teens & adults, underserved families, minority-owned small businesses, students needing digital literacy, workforce re-entry populations, and community groups across the Tri-State region.

Impact Goals (2025–2026):

- 300+ learners trained
- 50+ families supported
- 20+ small businesses modernized
- 10+ community partnerships

FUNDING NEED & USE OF FUNDS

Skybridgez seeks funding to build Phase 1 of the online learning platform, designed to reduce digital overwhelm and increase AI literacy. Funding priorities include platform development, curriculum creation, accessibility features, learning content production, and community pilot testing.
